

## Remote CAN Data Management

The Kvaser Memorator is a versatile CAN bus interface and standalone datalogger, available in single, dual, and five-channel variants. Standalone mode logs data to an SD card; interface mode provides a real-time connection between the CAN network and a PC, via USB.

The Kvaser Memorator is seamlessly integrated with ODOS Cloud Platform and Dashboard, offering advanced features for efficient CAN data management, visualization, and analysis.

### Key functionalities include:

- Upload:** Upload CAN data from Memorator local storage (SD card) to Secure Cloud remote storage.
- Analysis:** Comprehensive CAN data decoding, visualization, and signal analysis capabilities using Cloud dashboard.
- Export:** Export industry standard file formats such as ASCII, BLF, CSV, MAT, MDF4 files and many more...
- Collaborate:** Enhanced data sharing and distributed team collaboration via Cloud platform.

Choose ODOS for a simple, secure, and scalable solution that revolutionises the way you approach remote CAN data management, visualisation and analysis.

### Powered by ODOS Cloud Platform

Visualize your data with the simple, secure and scalable Dashboard of award-winning ODOS Cloud Platform.
